# On the DVD

Fedora 13

The famous Fedora Linux is a versatile community distro backed by one of the biggest (and oldest) Linux companies. Red Hat uses Fedora to perfect technologies that will one day appear in the advanced Red Hat Enterprise Linux system. The new Fedora 13 comes with a number of innovative new tools and features, including automated printer driver configuration and a new Internet-based installation method. An improved color management app makes it easier to calibrate monitors and scanners, and a retooled user account tool will simplify the task of managing users and groups.

■ DOUBLE-SIDED DVD

This DVD is a double-sided disc. A DVD device always reads the side of the disc that is facing down. This DVD is labeled like a normal DVD – the label you see as you place the disc into the tray applies to the data on the opposite side. If you are installing Fedora, the Fedora label should be facing up in the tray.

Sabayon 5.3

This Gentoo-based Linux offers elegance, good performance, and lots of extras. Version 5.3 features faster boot time and improved GRUB 2 support, as well as enhanced wireless networking and a new installer. Sabayon developers updated more than 1,000 packages for this release. Other improvements include encrypted filesystem support and enhanced 3D capabilities.
