- * Runs directly from the disc
- * Includes KDE 4.6.4, Chromium 12, LibreOffice 3.3.3, and more
- * Compatible with Debian "squeeze"
- * Installs easily on USB sticks

Knoppix 6.7 Live Distro

This month's *Linux Magazine* DVD features the brand new Knoppix 6.7 Live distro [1] [2]. With its clever on-the-fly decompression, Knoppix manages to store 9GB of software on a single-layer DVD.

Although typically used as a Live system, you can also install Knoppix on a hard drive. Machines supporting boot-up from USB devices can load Knoppix Live from a USB stick.

Knoppix version 6.7 [3] uses the 2.6.39.3 kernel and defaults into the Lightweight X11 Desktop Environment (LXDE). This version includes Chromium 12, LibreOffice 3.3.3, and a new version of the ADRIANE (Audio Desktop Reference Implementation And Networking Environment) desktop for blind and partially sighted users.

Knoppix Cheat Codes

Cheat codes [4] let you boot Knoppix with additional options. To view a list of LANG cheat codes, which include the language, keyboard, time zone, and other local settings, press F3 at the boot prompt. If you then type `lang=fr`, for example, Knoppix boots in the French language, applies the French keyboard layout settings, and sets the time zone to Paris, France.
